Instructions
supplémentaire

The Floorfixx optimum subfloor levels maximum 3 mm of unevenness at a length of 1 linear meters or yards.

In case of installation of several areas, install every area

Cut with a knife along the straight edge (square). Cut the board the second time as deep as possible.

With surfaces over 10 mtr length and/or width, make a dilatation joint in both Floorfixx optimum and the floorcovering.

De Floorfixx optimum egaliseert maximaal een hoogte van 3 mm over 1 strekkende meter.

Bij installatie van meerdere ruimtes, iedere ruimte afzonderlijk installeren.

Snij met het mes langs de winkelhaak. Snij de 2e keer met het mes de plaat zo ver mogelijk door.

Bij een oppervlak van 10 mtr lengte en/of breedte, dient een dilatatievoeg aangelegd te worden zowel in de Floorfixx optimum als in de vloerbekleding.

Floorfixx optimum egalisiert maximal 3 mm Unebenheit über eine Distanz von 1 lfm.

Bei Verlegung von mehrere Räumen, jedes Raum separat verlegen.

Schneiden Sie mit einem Messer den Stahlhinkel (Winkelmaß) entlang. Das 2. Mal die Platte so Tief möglich durchschneiden.

Bei Flächen von 10 mtr. lang und/oder breit soll eine Dehnungs-fuge gemacht werden in Floorfixx optimum und im Bodenbelag.

Le Floorfixx optimum égalise max. 3 mm sur une distance de 1 mtr. lin.

En cas de pose de plusieurs espaces, poser chaque espace séparément.

Coupez le panneau le long une règle/equerre avec un couteau. La 2-ème fois couper le panneau profond que possible.

En cas de surfaces de 10 mtr. de longueur ou largeur, faire un joint de dilatation dans le Floorfixx optimum et dans le revêtement.
